Harsha Vardhan Reddy Vippala

Data Analyst

+1 (989) 444-2817 | harshareddi.70@gmail.com | www.linkedin.com/in/harshareddie

PROFESSIONAL SUMMARY

Data Analyst with 4+ years of experience delivering data-driven insights and building scalable reporting solutions across supply chain and business operations. Strong expertise in SQL, Power BI (DAX, data modeling), and cloud data platforms (Azure Data Lake, Synapse) to analyze large datasets, ensure data quality, and develop actionable dashboards. Experienced in data validation, data transformation, and translating complex data into clear business insights for cross-functional stakeholders.

TECHNICAL SKILLS

BI & Reporting: Power BI (DAX, RLS, drill-through, what-if parameters), Tableau (Dashboard Development, Data Visualization, Publishing, User Access Management), Advanced Excel (Power Query, Pivot Tables, VBA, data analysis for inventory and reporting)

Languages: SQL (T-SQL, Snowflake SQL), Python (pandas, NumPy, scikit-learn, matplotlib, seaborn).

Cloud & Storage: Snowflake, Azure Synapse Analytics, Azure Data Lake Storage, Azure Data Factory, Azure ML

Other Tools: Databricks (Delta Lake querying), DBT, Power Automate, Git, GitHub, Azure DevOps

Analytics: Regression analysis, demand forecasting, anomaly detection, KPI design, data quality frameworks

Soft Skills: Stakeholder communication, requirements gathering, cross-functional collaboration, mentoring, documentation

PROFESSIONAL EXPERIENCE

Data Analyst

May 2023 – Present

Blue Yonder · Dallas, TX

Supply chain analytics, BI, and forecasting

- Developed Power BI dashboards to track inventory health, logistics delays, and on-time delivery performance, leveraging Tableau for additional visualization needs.
- Collaborated with data science teams to design and prepare Snowflake datasets and data models combining multiple data sources to support demand forecasting and business analysis, contributing to measurable improvements in forecast accuracy and inventory planning.
- Automated the end-to-end report distribution cycle using Power Automate, including refresh scheduling, stakeholder email delivery, and KPI threshold alerts reducing manual reporting effort by **60%** and eliminating recurring ad-hoc requests.
- Developed analytical models for demand forecasting and trend analysis using Python and integrated results into Power BI dashboards for business insights.
- Documented data definitions, reporting logic, and data sources to ensure consistency and support data governance practices.
- Translated analytical findings into actionable insights for business stakeholders, supporting operational decision-making.
- Built automated reporting solutions using Power Query, Power Pivot, and Excel, reducing manual effort and improving reporting efficiency.
- Redesigned legacy reports by standardizing data models and automating refresh processes, improving accuracy and consistency of KPI reporting.
- Built and maintained enterprise-level Power BI dashboards supporting business reporting and KPI tracking
- Developed and maintained automated data pipelines using SQL and cloud platforms, ensuring reliable and scalable data delivery for reporting and analytics.
- Managed end-to-end data lifecycle including data cleaning, transformation, validation, and implementation of data quality frameworks to ensure accurate and reliable datasets for analytics.

- Partnered with logistics and supply chain managers on sustained cost and delivery performance analysis, contributing to a **12% reduction in distribution costs** and significantly improved visibility into delay root causes.
- Designed and supported data pipelines and data models within Azure Data Lake and Synapse Analytics, enabling centralized and scalable data storage for reporting and analytics.
- Worked with large-scale datasets and applied statistical modeling to identify trends and operational issues
- Collaborated with stakeholders to translate business problems into data-driven and AI-enabled solutions, improving reporting processes and operational decision-making.
- Established data validation and anomaly detection routines across Snowflake and Power BI pipelines, implementing threshold checks and row count comparisons that ensured consistency and accuracy in daily KPI dashboards.

Data Analyst *Jun 2021 – Dec 2022*

Cimpress India Pvt Ltd · Bangalore, India

Sales analytics, BI reporting, and cloud data migration

- Designed and automated Power BI and Tableau dashboards by combining and modeling sales, customer, and financial datasets to support performance tracking and business insights.
- Optimized SQL queries, stored procedures, views, and indexes across SQL Server and Snowflake, reducing execution time on heavy reporting queries by approximately **30%** and improving overall pipeline throughput.
- Leveraged Python (pandas, NumPy) for data cleansing, feature engineering, and exploratory analysis, uncovering customer churn patterns that directly informed the retention team's next campaign strategy.
- Collaborated with data engineering teams to monitor and maintain Azure Data Factory pipelines ingesting data from flat files, APIs, and CRM systems into Azure Data Lake and Azure Synapse Analytics, owning failure detection and resolution coordination.
- Implemented automated data quality and validation checks in SQL and Python that executed prior to report publication, catching critical data issues before they reached leadership dashboards and strengthening stakeholder trust in analytics outputs.
- Contributed to the company's cloud migration initiative, translating and validating legacy on-premises SQL Server reports within Snowflake and Azure Synapse environments, ensuring output accuracy before production cutover.
- Built parameterized Power BI reports with dynamic DAX measures, enabling business users to perform self-service analysis and reducing ad-hoc data requests to the analytics team.
- Integrated R-based statistical methods into Python and SQL reporting workflows, supporting A/B test significance analysis and regression modeling on sales data.

EDUCATION

M.S. in Information Systems *Jan 2023 – Dec 2024*

Central Michigan University · Mount Pleasant, MI, USA

Relevant Coursework: Application Development · Data Visualization · Database Management for Business Systems
