PROFESSIONAL SUMMARY

Data Analyst with 4+ years of experience converting complex datasets into decisions that drive revenue, reduce operational cost, and improve business performance. At Blue Yonder, built reporting systems that eliminated 60% of manual effort and delivered supply chain and CRM analytics consumed by 12+ stakeholders weekly. At Cimpress, optimized SQL pipelines that cut reporting latency by 30% and surfaced customer churn patterns that directly shaped the retention team's campaign strategy. Skilled in SQL, Snowflake, Power BI, Python, and Looker across supply chain, sales, and financial domains, known for turning ambiguous business questions into structured analysis that stakeholders act on.

TECHNICAL SKILLS

BI & Reporting: Power BI (DAX, RLS, drill-through, what-if parameters), Tableau, Looker / Looker Studio, Advanced Excel (Power Query, Pivot Tables, scenario modeling, revenue forecasting)

Languages: SQL (T-SQL, Snowflake SQL, window functions, CTEs), Python (pandas, NumPy, scikit-learn, matplotlib, seaborn), R (statistical analysis, A/B testing), Jupyter Notebooks

Cloud & Platforms: Snowflake, Azure Data Lake Storage, Azure Synapse Analytics, Azure Data Factory, Databricks (Delta Lake).

Tools: Salesforce (CRM reporting, pipeline tracking, data validation), Google Analytics (GA4), DBT, Power Automate, Git GitHub

Analytics Techniques: Cohort analysis, funnel analysis, customer segmentation, A/B test significance testing, regression modeling, demand forecasting, KPI framework design, data quality auditing

PROFESSIONAL EXPERIENCE

Data Analyst | Blue Yonder | Dallas, TX (Remote) *May 2023 to Present*

Supply chain analytics, BI, and forecasting

- Automated the end-to-end report distribution cycle using Power Automate, including dataset refresh scheduling, stakeholder delivery, and KPI-based alerts, reducing manual reporting effort by 60% and eliminating recurring ad-hoc requests.
- Conducted exploratory data analysis (EDA) and trend analysis using SQL and Python on supply chain and sales data to surface delivery delay patterns, seasonal demand shifts, and pipeline health signals, directly informing quarterly planning discussions with leadership.
- Worked with structured and unstructured datasets across multiple reporting formats, including tabular and aggregated summaries, ensuring consistency for downstream reporting and visualization.
- Designed and deployed Power BI dashboards using DAX measures and Tableau reports to track supply chain KPIs, inventory health, and logistics performance, serving 8+ teams and reducing time to access operational metrics by 40%.
- Built end-to-end data validation workflows that caught critical data issues before stakeholder delivery, reducing reporting errors across 4+ production pipelines and strengthening leadership confidence in analytics outputs.
- Analyzed supply chain KPIs and exception reports to identify performance trends and root causes, supporting process improvements and data-driven decision-making across operations teams.
- Built and optimized SQL queries and ETL workflows using joins, aggregations, and window functions to extract, transform, and validate multi-source data, reducing data preparation time for recurring Power BI reports.
- Collaborated with supply chain, finance, and sales teams to define KPI frameworks and analytical requirements, ensuring alignment between business needs and reporting outputs.

Data Analyst | Cimpress India Pvt Ltd | Bangalore, India *Jun 2021 to Dec 2022*

Sales analytics, BI reporting, and cloud data migration

- Designed and automated Power BI and Tableau dashboards integrating sales, customer, and financial data, enabling performance tracking across sales and marketing teams.
- Optimized SQL queries, stored procedures, views, and indexes across SQL Server and Snowflake, reducing execution time on heavy reporting queries by 30% and improving overall pipeline throughput.
- Leveraged Python (pandas, NumPy) for data cleansing, feature engineering, and exploratory analysis, uncovering customer churn patterns that directly informed the retention team's next campaign strategy.
- Implemented automated data quality and validation checks in SQL and Python executed prior to reporting publication, catching critical data issues before reaching leadership dashboards and strengthening stakeholder trust in analytics.
- Built parameterized Power BI reports with dynamic DAX measures, enabling business users to perform self-service analysis and reducing ad-hoc data requests to the analytics team.
- Collaborated with data engineering teams to monitor and maintain Azure Data Factory pipelines ingesting data from flat files, APIs, and CRM systems into Azure Data Lake and Azure Synapse Analytics.
- Contributed to cloud migration initiative, translating and validating legacy on-premises SQL Server reports within Snowflake and Azure Synapse environments, ensuring output accuracy before production cutover.
- Integrated R-based statistical methods into Python and SQL workflows, supporting A/B test significance analysis and regression modeling on sales data.

PROJECTS

Supply Chain KPI Analysis *github.com/harshareddi70/supply-chain-kpi-analysis*

Python | pandas | SQL (Snowflake-compatible) | matplotlib | seaborn

- Problem: Supply chain teams lacked visibility in delivery performance gaps, revenue distribution, and the impact of discount on profitability across 180,000+ order records.
- Built an end-to-end Python (pandas) data cleaning pipeline that handled nulls, duplicates, PII removal, type coercion, and engineered KPI flags (delivery delay, late delivery, cancellation rate, profit margin).
- Developed 10 production-ready Snowflake-compatible SQL queries covering on-time delivery rate, YoY revenue growth (LAG), late delivery root cause by shipping mode and region, discount impact analysis, and data quality audits.
- Identified a 57.3% late delivery rate concentrated in First Class and Same Day shipping modes and recommended deprioritizing these modes for high-volume orders as a cost-reduction strategy, providing operations leadership with a clear, data-backed action plan.

EDUCATION

M.S. in Information Systems | Central Michigan University | Mount Pleasant, MI *Jan 2023 to Dec 2024*

Relevant Coursework: Application Development, Data Visualization, Database Management for Business Systems
